Dear Mr. Torres,

Please help us stop TexCom from installing and operating waste injection wells in the abandoned oil field near Conroe, TX. The site is not stable and if the wells fail, it will be too late. The water supply for over 50 counties will be ruined.

It will impact our traffic and cause safety hazards with all of the 18 wheelers hauling their potentially dangerous wastes to this site. The traffic along I-45, Crighton Road, and Loop 336 will be terrible. There is a new elementary school being built just a few miles from this site and it is surrounded by neighborhoods.

There have already been both above-ground and below-ground injection well failures. If there is even the slightest chance of that happening, it is too late to correct it by the time the problem is found.

Our community does not oppose injection wells for hazardous and non-hazardous wastes. We just oppose this dangerous location which is way too close to our homes, schools, and water supply for millions of people. We're already having problems with falling property values. This will wipe out our chances of selling our homes and we will lose everything we have.

Please do not let this be on your conscious. Help us stop TexCom before it's too late. It's time for Texas to become more environmentally responsible. I know that you and your staff must feel the same way about saving our environment. Thank you so much for your support!

Please save our water!!!
